Resume

Early-career mathematician and software developer with a strong foundation in programming logic, data analysis, and automation. I work as a freelancer developing system integrations and AI-driven solutions, with a focus on optimizing processes and delivering practical value to client needs.

Featured Projects

- **ARIMA Analyzer** (Link)

  - Developed an interactive web-based tool for time series analysis and forecasting using ARIMA models.
  - Implements automated stationarity and seasonality testing, model selection, and forecasting.
  - Provides interactive visualizations for training, test, and forecasted data, supporting analytical usage.
  - Built with TypeScript, React, Tailwind CSS, Next.js, and Plotly.
  - Reduced manual analysis time by up to ~90% compared to traditional ARIMA modeling workflows.

- **Hardware Benchmark** (GitHub)

  - Designed and implemented a system to collect, store, and visualize real-time hardware metrics.
  - Monitors CPU, GPU, and RAM usage, temperature, and energy consumption.
  - Delivers interactive dashboards enabling exploratory and inferential performance analysis.
  - Built using Rust for data ingestion, InfluxDB for time series storage, and Grafana for visualization.
  - Reduced manual performance diagnostics time by ~70% while enabling real-time hardware benchmark.

Education

- **Bachelor's degree in applied mathematics** | **FURG** *2020 - 2024*

  grade: Numerical Calculus, Linear Algebra, Analytical Geometry, Descriptive and Inferential Statistics. Probability, Operations Research, Econometrics, Finance.

Skills

- **Backend development**: Rust, Python, Tensorflow, Flask, NodeJS
- **Frontend development**: JavaScript, TypeScript, React, Tailwind
- **Data storage**: MySQL, PostgreSQL, SQLite, MongoDB, InfluxDB
- **Automation and tools**: Bash, Git, GitHub Actions, Docker, Ollama, Grafana

Languages

- **Portuguese**: *Native*
- **English**: *Intermediate* (read, write and listen)
