Resume

Early-career mathematician and programmer with a solid foundation in programming logic and data analysis. I am interested in automation, systems integration, and AI applications, seeking my first opportunity to work on developing solutions that optimize processes and meet real customer needs.

Featured Projects

- **Stringler** (🐙 [GitHub](#))
 - Faced with the need to automate and analyze multiple textual documents efficiently, I built a modular NLP pipeline with a Rust analytics core and Python scripts for sentiment analysis, visualization, and reporting. The tool generates statistical and sentiment insights in a customizable template with text and graphics using Matplotlib and Pillow.
- **Hardware Benchmark** (🐙 [GitHub](#))
 - To address the lack of real-time PC component monitoring, I designed a system to collect and display performance data (CPU, GPU, RAM) in real time. Built using Rust, InfluxDB, and Grafana in Docker Compose, it delivers dashboards with usage, temperature, and energy metrics from multiple IoT sensor inputs, facilitating access to inferential analysis.

Education

- **Bachelor's degree in applied mathematics | FURG** 📅 2020 - 2024

Grade: Numerical Calculus, Linear Algebra, Analytical Geometry, Descriptive and Inferential Statistics. Probability, Operations Research, Econometrics, Finance.

Skills

- **Languages:** Portuguese (Native), English (Intermediate)
- **Backend:** Rust, Python, Tensorflow, NodeJS
- **Frontend:** JavaScript, TypeScript, React, Tailwind
- **DevOps:** Bash, Git, Docker
- **Storage:** MySQL, PostgreSQL, InfluxDB
- **Tools:** Grafana
